**New construction of the regional landfill –  
the non-hazardous waste management  
complex with an access road in  
Konotop Territorial Community**

# PROBLEM AND NEEDS TO BE SOLVED IN THE PROJECT

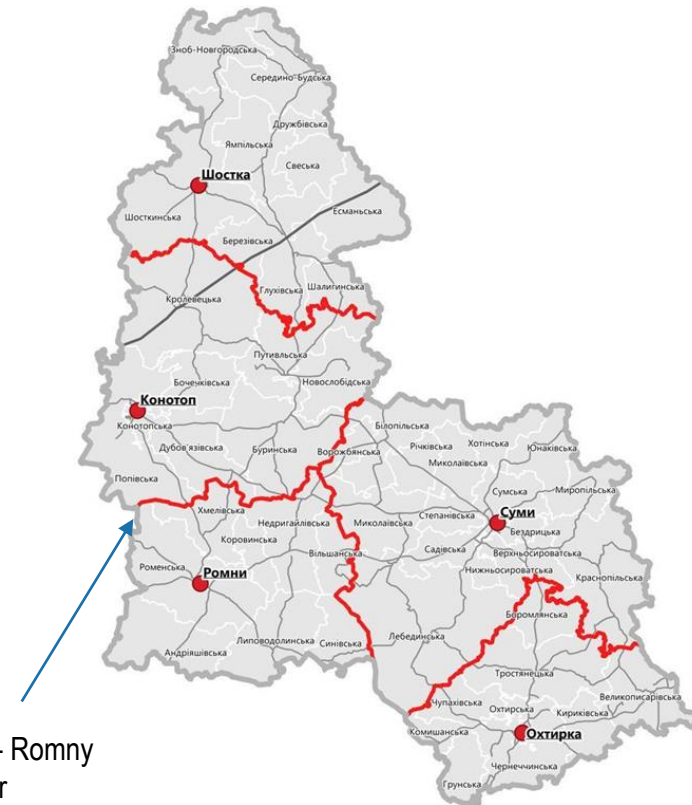

A strategic document has been developed in the region – the **Regional Waste Management Plan in Sumy Oblast until 2030 (RWMP)**. The RWMP envisages the closure of existing household waste disposal facilities in the cluster and the creation of one household waste disposal facility - **the regional landfill in the Konotop community**.

**PROJECT OBJECTIVE:** establishment of an integrated household waste management system within the Konotop-Romny cluster

The cluster includes **16 territorial communities**

Total population of the cluster - **301.917 thousand people**

The estimated amount of household waste generated was approximately **90575 tons per year**

The Konotop- Romny cluster

# The specific objectives of the project

- **construction of a regional landfill** using modern technological solutions to ensure the disposal of household waste in the Konotop-Romny cluster in compliance with all environmental safety requirements instead of the current uncontrolled waste disposal;
- **construction of a sorting line** to increase the volume of resource-rich components to be recovered from household waste and sent for recycling;
- **construction of a biowaste composting facility** to reduce the amount of biowaste decomposing at the landfill and return part of the organic matter to the ecological cycle;
- **reducing greenhouse gas emissions** from household waste disposal.

# ESTIMATED PROJECT BUDGET

Activity	EUR
Funding for the development of the project design, expert review, and environmental impact assessment	~ 134146,34
Financing of construction works	~ 10935601.46*
Funding for commissioning and verification	~ 48602.67

\*Currently, the project has no external support, but its team is actively looking for partners and funding. Funding will come from the cluster's communities, the regional budget, and international investors.

## Cooperation with U-LEAD:

The development of design and estimate documentation for the regional landfill is being carried out within the framework of an international technical assistance project supported by the **U-LEAD with Europe program**.

The Konotop community is preparing the necessary urban planning and land documentation, undergoing the environmental impact assessment procedure and expert review.
